Memorandum

To: State Director, Eastern States (ES-930)

From: Field Manager, Jackson

Subject: National Environmental Policy Act (NEPA) Review for Expressions of Interest (EOI) in Louisiana, MS

We have completed our NEPA review for 2 EOIs in Mississippi (EOI # 1699 and #1721). The Determination of NEPA Adequacy Form (DNA) is attached. This is planned for the upcoming September 2013 lease sale. Please return a signed copy of the DNA to me for our records. If you have any questions, please contact Alison McCartney at (601) 977-5407.

*Bruce Dawg*

1 DNA Document

WILD HORSES & BURROS • CADASTRAL SURVEY • GENERAL LAND OFFICE RECORDS • MINERALS • RENEWABLE RESOURCES

### Conclusion

Based on the review documented above along with attached lease stipulations, I conclude that this proposal conforms to the applicable land use plan and that the National Environmental Policy Act (NEPA) documentation fully covers the proposed action and constitute the Bureau of Land Management (BLM) compliance with the requirements of NEPA.

**Note:** The signed Conclusion on this Worksheet is part of an interim step in the BLM's internal decision process and does not constitute an appealable decision. However, the lease, permit, or other authorization based on this DNA is subject to protest or appeal under 43 CFR Part 4 and the program-specific regulations.

## Worksheet

### Interim Documentation of Land Use Plan Conformance and NEPA Adequacy (DNA) U.S. Department of the Interior Bureau of Land Management

---

Note: This Worksheet is consistent with the policies stated in the Instruction Memorandum entitled, *Documentation of Land Use Plan Conformance and National Environmental Policy Act (NEPA) Adequacy*. Transmitting this Worksheet and the guidelines for using the DNA Worksheet are located in Appendix 8 - 161 H-1790-1 of *The National Environmental Policy Act Handbook* (<http://www.blm.gov/wy/st/en/info/NEPA.html>).

#### A. Describe the Proposed Action

The proposed action is for the Bureau of Land Management Eastern States Office (BLM ES) to lease 289.20 acres at the following locations:

**EOI #1699** - MS, Amite County, T1N, R4E, Sec. 39, all and Sec. 26, 31/2NW1/4 (403.34 acres)

**EOI #1721** - MS, Jasper County, T2N, R13E, Sec. 20, SWSE, SESW (80 acres)

The lease parcels would be subject to additional BLM-ES conditions which would include lease stipulations and lease notices (Attachment 1). BLM-ES would offer the parcels at the September 2013 oil and gas lease sale.

#### B. Land Use Plan (LUP) Conformance

LUP Name: Record of Decision for the Approved Resource Management Plan/ Final Environmental Impact Statement for Public Lands and Minerals Administered in Mississippi by the Bureau of Land Management Eastern States Jackson Field Office

Date Approved: 1/26/09

The proposed action, including the attachment of appropriate stipulations, is in conformance with the applicable LUP because it is specifically provided for in the following LUP decisions:

The Record of Decision for the Approved Resource Management Plan/ Final Environmental Impact Statement for Public Lands and Minerals Administered in Mississippi by the Bureau of Land Management Southeastern States Field Office (MS ROD) states that 305,640 acres of BLM-administered, non-USFS Federal Mineral Ownership (FMO) will be open to oil and gas leasing.

Lease stipulations regarding the following topics are applicable to the proposed action:

- Cultural Resources and Tribal Consultation
- Endangered Species
- Sensitive Plant Species

- Aquatic Habitats
- Gopher Tortoise
- Louisiana Black Bear
- Red-cockaded Woodpecker

Lease notices/Best Management Practices (BMPs) including the followings topics also apply to the proposed action:

- Disposal of Produced Water
- Migratory Birds and Federally Listed Wildlife
- Perching and Nesting Birds and Bats
- Invasive and Non-native Species
- Pesticide Application

These BMPS are outlined in the MS ROD and *Surface Operating Standards and Guidelines for Oil and Gas Exploration and Development, Gold Book* (BLM 2006).

**C. Identify applicable NEPA documents and other related documents that cover the proposed action.**

List by name and date all applicable NEPA documents that cover the proposed action.

LUP Name: Alabama and Mississippi Final Environmental Impact Statement for Public Lands and Minerals Administered by the Bureau of Land Management Eastern States Jackson Field Office

Date Approved: 8/08

**D. NEPA Adequacy Criteria**

**1. Is the current proposed action substantially the same action (or is a part of that action) as previously analyzed? Is the current proposed action located at a site specifically analyzed in an existing document?**

The proposed action is part of an action previously analyzed in the MS ROD which states that 305,640 acres of BLM-administered, non-USFS Federal Mineral Ownership (FMO) will be open to oil and gas leasing. Lease stipulations and notices will be used to reduce adverse effects caused by surface-disturbing or disruptive activities associated with oil and gas operations on BLM-administered, non-USFS FMO.

**2. Is the range of alternatives analyzed in the existing NEPA document(s) appropriate with respect to the current proposed action, given current environmental concerns, interests, and resource values?**

The range of alternatives analyzed in the MS ROD is appropriate with respect to the current proposed action. A wide range of environmental concerns and resource values surrounding leasing and the potential development of federal minerals was extensively addressed in the MS ROD.

**3. Is the existing analysis valid in light of any new information or circumstances?**

The existing analysis contained in the MS ROD is current and there is no new information or circumstances that has arisen that would render the previous analyses inadequate.

**4. Do the methodology and analytical approach used in the existing NEPA document(s) continue to be appropriate for the current proposed action?**

The MS ROD was signed on January 2009. Therefore the methodology and analytical approach used is up to date and appropriate to use for leasing the proposed parcel.

**5. Are the direct and indirect impacts of the current proposed action substantially unchanged from those identified in the existing NEPA document(s)? Does the existing NEPA document analyze site-specific impacts related to the current proposed action?**

The direct and indirect impacts of the proposed action have not changed substantially from those analyzed in the NEPA documents cited above. The previous NEPA analyses address the same site-specific impacts for the proposed action.

**6. Are the cumulative impacts that would result from implementation of the current proposed action substantially unchanged from those analyzed in the existing NEPA document(s)?**

**Documentation of answer and explanation:**

No new cumulative impacts would result beyond those previously addressed in the NEPA documents cited above.

**7. Are the public involvement and interagency review associated with existing NEPA document(s) adequate for the current proposed action?**

The public involvement and review process for the NEPA documents cited above is adequate for the proposed action.

**E. Interdisciplinary Analysis: Identify those team members conducting or participating in the NEPA analysis and preparation of this worksheet.**

Name: Alison McCartney Title: Natural Resource Specialist

## **Attachment 1**

### **Stipulations**

#### **Cultural Resources and Tribal Consultation**

**Stipulation:** This lease may be found to contain historic properties and/or resources protected under the National Historic Preservation Act (NHPA), American Indian Religious Freedom Act, Native American Graves Protection and Repatriation Act, E.O. 13007, or other statutes and executive orders. The BLM will not approve any ground disturbing activities that may affect any such properties or resources until it completes its obligations under applicable requirements of the NHPA and other authorities. These obligations may include a requirement that you provide a cultural resources survey conducted by a professional archaeologist approved by the State Historic Preservation Office (SHPO). If currently unknown burial sites are discovered during development activities associated with this lease, these activities must cease immediately, applicable law on unknown burials will be followed and, if necessary, consultation with the appropriate tribe/group of federally recognized Native Americans will take place. The BLM may require modification to exploration or development proposals to protect such properties, or disapprove any activity that is likely to result in adverse effects that cannot be successfully avoided, minimized or mitigated.

#### **Endangered Species**

**Stipulation:** The lease area may now or hereafter contain plants, animals, or their habitats determined to be threatened, endangered, or other special status species. BLM may recommend modifications to exploration and development proposals to further its conservation and management objective to avoid BLM-approved activity that will contribute to a need to list such a species or their habitat. BLM may require modifications to or disapprove proposed activity that is likely to result in jeopardy to the continued existence of a proposed or listed threatened or endangered species or result in the destruction or adverse modification of a designated or proposed critical habitat. BLM will not approve any ground-disturbing activity that may affect any such species or critical habitat until it completes its obligations under applicable requirements of the Endangered Species Act as amended, 16 U.S.C. ' 1531 et seq., including completion of any required procedure for conference or consultation.

**Exception:** None

**Modification:** None

**Waiver:** None

#### **Sensitive Plant Species**

**Stipulation (CSU):** All suitable special status plant species habitat will be identified during environmental review of any proposed surface use activity. If field examination indicates that habitat of one or more of these species is present, BLM will require a survey by a qualified botanist for special status plants during time periods appropriate to each species. Operations will not be allowed in areas where sensitive plants would be affected.

**Objective:** To protect threatened, endangered, candidate, proposed, and BLM Sensitive Plant Species.

**Exception:** An exception may be granted if the operator agrees to implement measures developed in consultation with USFWS and coordination with state agencies.

**Modification:** The stipulation may be modified if it is determined that a portion of the lease area does not support sensitive plant species.

**Waiver:** The stipulation may be waived if it is determined that the lease area does not support sensitive plant species.

### **Freshwater Aquatic Habitat**

**Stipulation (NSO):** No surface occupancy or disturbance, including discharges, are permitted within 250 feet of a river, stream, wetland spring, headwater, wet meadow, wet pine savanna, pond, tributary, lake, coastal slough, sand bar, vernal pools, calcareous seepage marsh, or small, marshy calcareous stream. If the slope exceeds 10 percent, the buffer may be extended to 600 feet to provide adequate protection for aquatic habitats and associated species.

**Objective:** To protect the water quality of watersheds and natural stream substrate and morphology and to avoid potential impacts to aquatic species and their habitat.

**Exception:** An exception may be granted if the operator agrees to 1) span creeks, rivers, wetlands, and floodplains by attaching pipelines to bridges; 2) directionally drill wells and pipelines from upland sites under creeks, rivers, other waters, and wetlands or 3) implement other measures developed in consultation with USFWS and in coordination with State agencies.

**Modification:** The buffer may be reduced if the adjacent waterway has been surveyed for 100 yards upstream and 300 yards downstream of the site, and the results document the lack of suitable/occupied/critical habitat for listed species which may be affected by the project, as determined by the BLM and USFWS.

**Waiver:** None

### **Gopher Tortoise and Other Commensal Species**

**Stipulation (CSU):** BLM-approved surveys will be required in all suitable gopher tortoise habitat where the tortoise is listed, including: Choctaw, Washington, Sumter, and Mobile counties in Alabama; and Clarke, Covington, Forrest, George, Greene, Hancock, Harrison, Jackson, Jones, Jasper, Jefferson Davis, Lamar, Marion, Pearl River, Perry, Smith, Stone, Walthall, and Wayne Counties in Mississippi. No surface disturbance or activity is permitted within 600 feet of a gopher tortoise burrow.

Suitable habitat includes areas with deep, well-drained and excessively well-drained sandy soils, especially the following USDA-NRCS soil series and with an open understory with grass and forb groundcover open areas. Suitable soils include Alaga, Bigbee, Eustis, Lakeland, Waldley or Troup, McLaurin, Benndale, Heidel, Bama, Smithdale, Ruston, Lucedale, Lucy, Shuguta, Baxterville, Malbis, Poarch, Saucier, Susquehanna, Boswell, Lorman, Freestone, Freest, Prentis, Savannah, Basin, and Petal.

**Objective:** To protect habitat for gopher tortoise and other commensal species, including eastern indigo snake and gopher frog.

**Exception:** Exceptions may be granted if the proponent agrees to implement measures developed in consultation with USFWS and coordination with state agencies.

**Modification:** This stipulation may be modified if suitable gopher tortoise habitat does not exist on the stipulated area and that area does not provide forage habitat for adjacent tortoise populations. Survey requirements may be modified if current tortoise surveys of the tract are approved by BLM and USFWS.

**Waiver:** This stipulation may be waived if suitable gopher tortoise habitat does not exist on the tract and the tract does not provide forage habitat for gopher tortoises in adjacent areas.

### **Louisiana Black Bear**

**Stipulation (NSO):** No surface disturbance, including removal of potential den trees, is permitted within a 1,500-foot buffer around den trees in occupied bottomland hardwood and floodplain forest habitats.

**Objective:** To protect Louisiana black bear denning and foraging habitat.

**Exception:** An exception may be granted if the operator agrees to implement measures developed in coordination with USFWS and appropriate state agencies.

**Modification:** Temporary surface use may be permitted if the USFWS concurs that the action would not adversely affect Louisiana black bear or suitable habitat.

**Waiver:** This stipulation may be waived if the tract does not contain suitable Louisiana black bear habitat.

### **Red-Cockaded Woodpecker**

**Stipulation (NOS):** No surface occupancy or disturbance within 0.5 mile of a red-cockaded woodpecker cluster, defined as the area containing all active and inactive cavity trees, plus a 200-foot buffer zone surrounding that area. Vehicle use is prohibited within a cluster except for through-travel on existing, maintained, paved roads.

**Objective:** To protect red-cockaded woodpecker nest sites from disturbance and habitat degradation.

**Exception:** An exception may be granted to allow surface occupancy within one-half mile of a cluster if the operator agrees to measures developed in consultation with USFWS and in coordination with state agencies.

**Modification:** This stipulation may be modified if a portion of the stipulated area no longer within the one-half mile buffer zone.

**Waiver:** This stipulation may be waived if no cluster can be identified within one-half mile of the leased tract.

## **Lease Notices**

### **Disposal of Produced Water**

**Objective:** To protect aquatic habitats for and to avoid potential impacts to special status fish, mussels, turtles, snails, plants, and migratory birds.

The preferred method for disposal of produced water will be through reinjection to a permeable formation with total dissolved solids (TDS) content higher than 10,000 milligrams per liter (mg/L) where the aquifer is not hydrologically connected to caves, wetlands, or surface water. In Alabama, the injection of produced water is regulated by the Alabama State Oil and Gas Board. In Mississippi, the injection of produced water is regulated by the Mississippi Department of Environmental Quality (MDEQ) and the Mississippi Oil and Gas Board.

If reinjection is not practicable, closed-containment treatment systems should be used to contain and treat produced water for those contaminants and sediments exceeding State standards or EPA criteria. Salt content of any surface ponds for produced water, pigging pits, or other fluids must be less than 7,500 microsiemens per centimeter ( $\mu\text{S}/\text{cm}$ ). If surface pond salt content is greater than 7,500  $\mu\text{S}/\text{cm}$ , if other bird toxicity is present, or if the surface exhibits sheen, then the ponds must be netted or covered with floating balls, or other methods must be used to exclude migratory birds.

Produced waters may be released into an impounded reservoir if there is documentation that the discharge site and affected waters do not support special status species, are not designated critical habitat, and State and Federal water quality standards/criteria are met.

Produced waters may be released into a stream/river if the discharge site and affected waters have been recently surveyed and lack special status species, or if the applicant conducts approved surveys documenting the absence of special status species, State and Federal water quality standards/criteria are met, and a National Pollution Discharge Elimination System (NPDES) permit is obtained. The applicant should be aware that some species can be surveyed only during certain times of the year.

Produced waters may be released into a stream/river if the applicant can document that the produced waters would not adversely affect special status species. Water quality tests would be conducted on stream segment(s) or other locations proposed as discharge points, volumes to be released, and any settling ponds or other treatments proposed to improve wastewater quality. The water quality test data, any monitoring proposed, and other available information about general coalbed methane effluent characteristics (from published or unpublished literature) shall be reviewed by USFWS. Information about timing of the releases in relation to low water and other planned BMPs would also be required. Testing would include analysis of the discharge site and affected waters for chemical oxygen demand (COD), conductivity, total suspended solids (TSS), As, Hg, Se, and polycyclic aromatic hydrocarbons (PAH). Dissolved oxygen and ammonia standards/criteria must be met in bottom waters if they support listed benthic or epibenthic species. If a special status species has been documented to be more sensitive than State/Federal standards/criteria, site-specific standards for that species may be imposed. Calculations would be based on State standards (or Federal CCC criteria for protection of freshwater aquatic life when the State has not determined a standard for these parameters).

### **Migratory Birds and Federally Listed Wildlife**

**Objective:** To protect perch and roosting sites and terrestrial habitats for and to avoid potential impacts to migratory birds and federally listed wildlife.

Any reserve pit that is not closed within 10 days after a well is completed and that contains water must be netted or covered with floating balls, or another method must be used to exclude migratory birds.

All powerlines must be built to protect raptors and other migratory birds, including bald eagles, from accidental electrocution, using methods detailed by the Avian Power Line Interaction Committee (APLIC 2006)

### **Perching and Nesting Birds and Bats**

**Objective:** To prevent birds and bats from entering or nesting in or on open vent stack equipment.

Open vent stack equipment, such as heater-treaters, separators, and dehydrator units, will be designed and constructed to prevent birds and bats from entering or nesting in or on such units and, to the extent practical, to discourage birds from perching on the stacks. Installing cone-shaped mesh covers on all open vents is one suggested method. Flat mesh covers are not expected to discourage perching and will not be acceptable.

### **Invasive and Non-Native Species**

**Objective:** To discourage the spread of invasive, non-native plants.

Use of native or non-invasive plants in seeding mixtures will be encouraged to stabilize disturbed areas and during restoration activities. Construction sites will be surveyed for invasive species prior to ground disturbance. If invasive species are found, the proper control measures will be used to either eradicate the species from the area or minimize its spread to other areas. If cogongrass is found on site, equipment will be washed before exiting the site to prevent the spread of this highly invasive species to other locations. Post-construction monitoring for cogongrass and other invasive plant species should be conducted to ensure early detection control. In the case of split-estate lands, final seed mixtures will be formulated in consultation with the private landowner.

### **Pesticide Application**

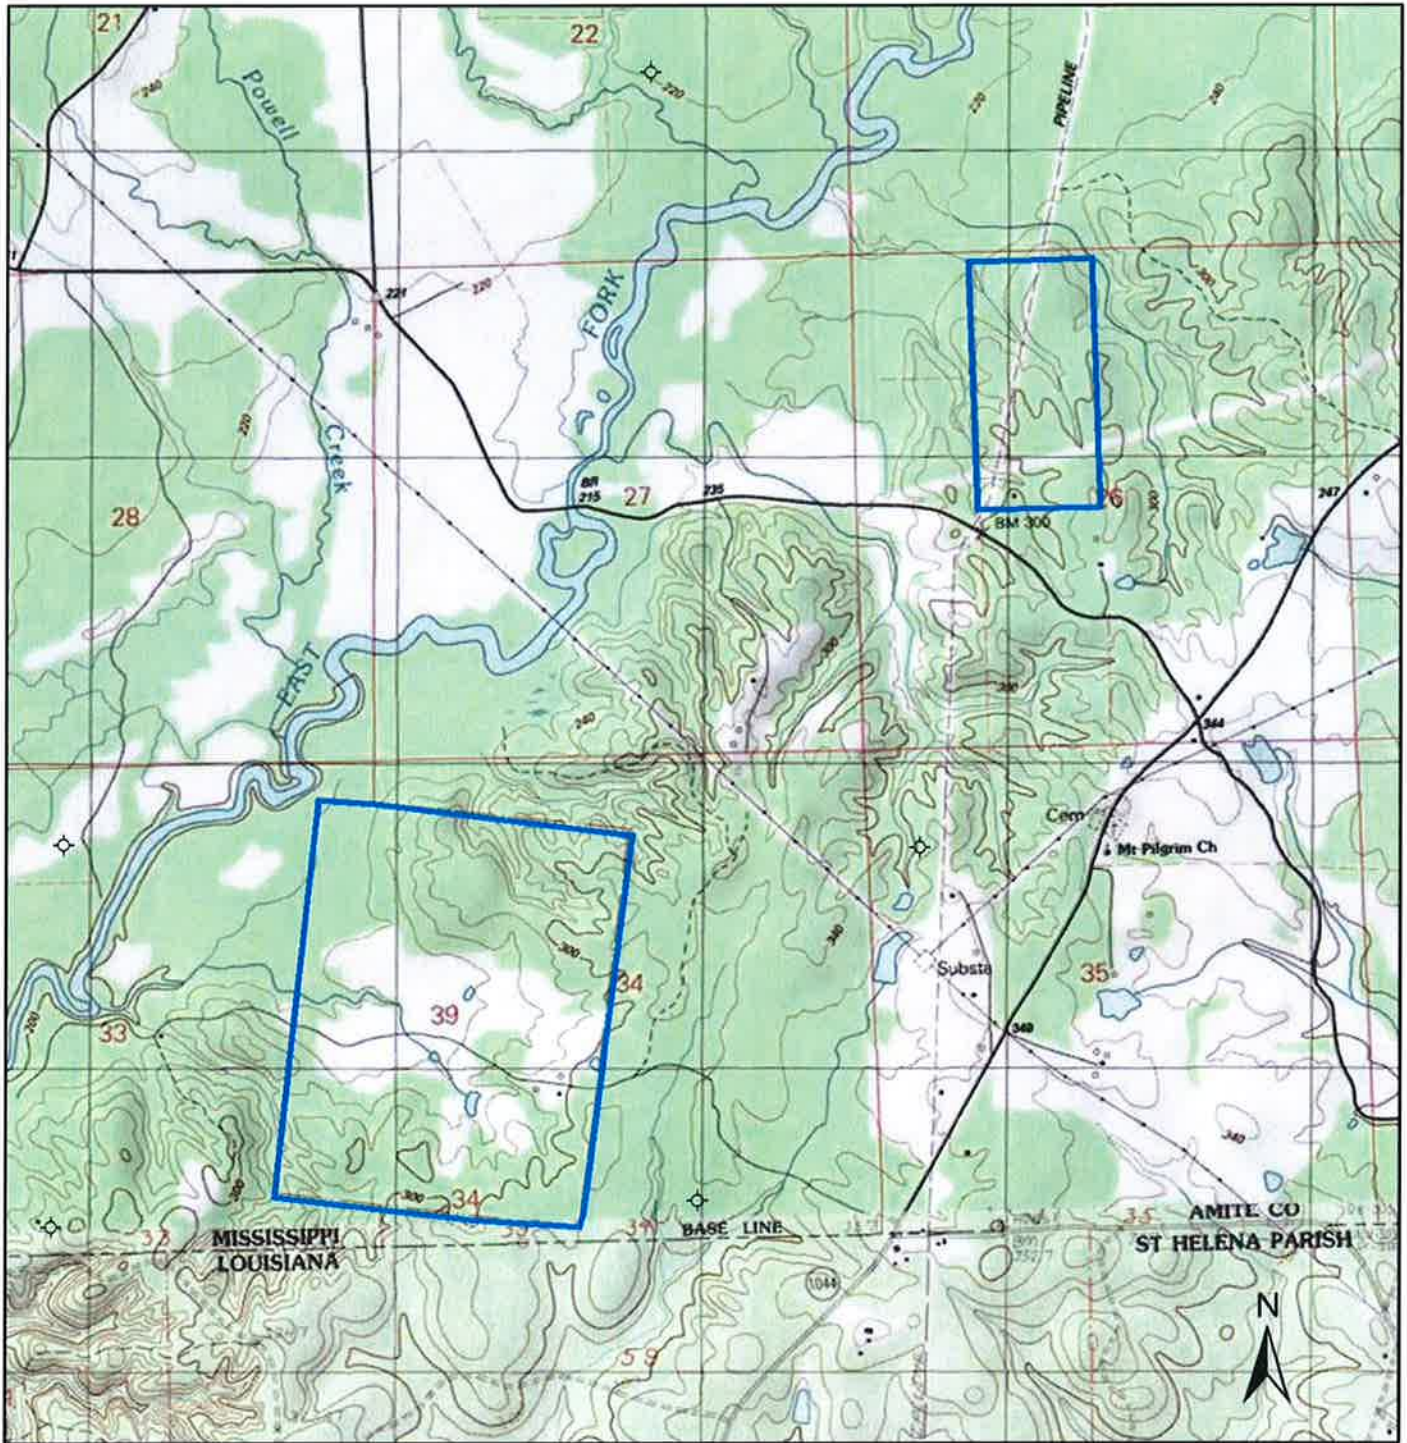

**Objective:** To protect the water quality of watersheds and natural stream substrate and morphology supporting special status species and their host species.

Any ground application of herbicides or other pesticides, sterilants, or adjuvants within 150 feet of listed species or habitat will require site-specific control measures developed in coordination or formal consultation with USFWS. No aerial application of herbicides or pesticides will be permitted.

**Informal Consultation Request**

**Submitted By:** Alison McCartney, Bureau of Land Management

**Date:** 3/7/13

**Project:** Oil and Gas Lease Nomination in Amite County, Mississippi

**Project Title:** EOI #1699

**INTRODUCTION**

An oil and gas lease nomination was submitted to the Bureau of Land Management, Southeastern States Field Office on December 3, 2012. The proposed project site consists of two parcels located ~ 3 miles apart (see map). The northern parcel consists of 80 acres and the southern parcel contains 323.34 acres at the following locations: MS, Amite County, T1N, R4E, Sec. 39, all and Sec. 26, 31/2NW1/4. The tracts are privately owned and contains federal minerals subsurface. The proposed sites are located ~ 12 miles south of the town of Liberty and ~ 1 mile east of the East Fork of the Amite River.

**HABITAT DESCRIPTION**

Approximately 90% of the northern parcel is either cleared land or contains young planted loblolly pines (*Pinus taeda*). Gravel roads run throughout the property and a gas line runs north/south through the center. There is a clump of trees in the northwest corner and southeast corner. The trees are primarily larger loblolly pine (~ 30 – 40 ft tall) with some hardwoods including southern red oak (*Quercus falcata*) and white oak (*Q. alba*). The larger southern parcel contains ~ 150 acres of cleared land. The northeast and southwest corners contain many dirt roads and was previously logged. Several dirt/gravel roads, a house and pastures are located in the center of the tract. Large acreages of planted pines surround these areas. The northwest and southeast corners contains a pine/mixed hardwood forest. Dominant tree species include; loblolly pine (*Pinus taeda*), shortleaf pine (*P. echinata*), southern red oak (*Q. falcata*) and post oak (*Q. stellata*).

**FEDERALLY LISTED SPECIES**

There are 2 federally listed species documented to occur in Amite County, Mississippi according to the U.S. Fish and Wildlife Service (FWS); Louisiana black bear (*Ursus americanus luteolus*) and red-cockaded woodpecker (*Picoides borealis*). The BLM has concluded with a “may affect, not likely to adversely affect” determination for these two species due to the fact that there is potential habitat on the tracts to support these species.

### FISH AND WILDLIFE SERVICE

Mississippi Field Office  
6578 Dogwood View Parkway, Suite A  
Jackson, Mississippi 39213

March 13, 2013

IN REPLY REFER TO:  
2013-I-478

Ms. Alison McCartney  
Bureau of Land Management  
411 Briarwood Drive, Suite 404  
Jackson, MS 39206

Dear Ms. McCartney:

The Fish and Wildlife Service (Service) has reviewed the information in your letter dated March 7, 2013, regarding the proposed oil and gas lease nomination (EOI #1699) in Amite County, Mississippi. Our comments are submitted in accordance with the Endangered Species Act (ESA) (87 Stat. 884, as amended; 16 U.S.C. 1531 et seq.).

Based on the information provided in your letter, the Service concurs with your determination that the proposed project "may affect, but is not likely to adversely affect" federally listed species. No further consultation under the ESA is required with this office unless there are changes in the scope or location of the proposed project, or if listed species are discovered during construction.

If you have any questions, please contact David Felder of our office, telephone: (601) 321-1131.

Sincerely,

for Stephen M. Ricks  
Field Supervisor  
MS Field Office

**Informal Consultation Request**

**Submitted By:** Alison McCartney, Bureau of Land Management

**Date:** 3/7/13

**Project:** Oil and Gas Lease Nomination in Jasper County, Mississippi

**Project Title:** EOI #1721

**INTRODUCTION**

An oil and gas lease nomination was submitted to the Bureau of Land Management, Southeastern States Field Office on November 13, 2012. The parcel contains 80 acres at the following location (see attached map): MS, Jasper County, Choctaw Meridian, T2N, R13E, Sec. 20, SWSE, SESW. The tract is privately owned and contains federal minerals subsurface. The proposed site is located ~ 5 miles south/southeast of the town of Paulding.

**HABITAT DESCRIPTION**

The proposed project site is almost completely forested. A county road runs through the tip of the southeast corner. A lake ~ 5 acres is located along the western boundary. Young planted pines are located along the southern boundary of the western 40 acres. The remainder of the tract consists of a pine/mixed hardwood forest. Dominant tree species include; loblolly pine (*Pinus taeda*), shortleaf pine (*P. echinata*), southern red oak (*Q. falcata*) and post oak (*Q. stellata*).

**FEDERALLY LISTED SPECIES**

There are 3 federally listed species documented to occur in Jasper County, Mississippi according to the U.S. Fish and Wildlife Service (FWS); Louisiana black bear (*Ursus americanus luteolus*), red-cockaded woodpecker (*Picoides borealis*), and gopher tortoise (*Gopherus polyphemus*). The BLM has concluded with a "may affect, not likely to adversely affect" determination for these three species due to the fact that there is potential habitat on the tract to support these species.
